1) Due to its design, this 2x3/2 directional valve with negative overlap cannot remain in a position where all channels are closed.

Technical information

The min. control pressure must be adhered to, since otherwise faulty switching and valve failure may result!
The pressure dew point must be at least 15 °C under ambient and medium temperature and may not exceed 3 °C .
The oil content of compressed air must remain constant during the life cycle.
Use only the approved oils from AVENTICS. Further information can be found in the “Technical information” document (available in the MediaCentre).
A duty cycle of 100 percent is only valid for single valves.
